## Identification of Technologies & Actors in the Green Microfinance Field

 <b>Services</b>  Technical Assistance	 <b>Topics</b>  Clean Energy Technologies	 <b>Date</b>  May – August 2014
 <b>Partners</b>  Co2 Logic, Alteractive	 <b>Clients</b>  Appui au Développement Autonome (ADA)	 <b>Beneficiaries</b>  Local microfinance institutions, technology providers and suppliers

### Project Description:

MEI was commissioned to complete and update the data of studies conducted in 2011-2012 within the framework of the LuxDev project. The ultimate goal is to identify technologies which meet the needs of the market (end users and value chain) and are easily marketable, but also the needs of the value chain's actors.

### Services Provided:

- Proposed methods on data collection for the technology analysis, equipment's sheets templates, information regarding the main stakeholders
- Pre-selection of the 11 technologies, list of contacts and stakeholders and their influence/dependence level
- Comparative analysis of the identified technologies; elaboration of sheets on the most significant ones, including the main technical and financial specifications and information on the value and distribution chains; recommendations
- Piloting: recruitment and contracting with the local consultants
- Identification of potential partner organizations
- Field mission: establishment of a contact list, data collection method in accordance with the methodology proposed

Energy technologies & energy uses:
